007404-000524.JBM.211072 Atty. Docket BMID 9826 US

AMENDMENTS TO THE CLAIMS

1-40. (Canceled)

41. (Presently Amended) A test strip comprising a flexible flat support on which one or

several test fields are arranged next to one another, wherein said test fields carry one or several

detection layers stacked on top of one another, and wherein the test fields are covered by an overlay

made of a spreading material comprising a porous flat structure impregnated with a wetting agent,

wherein the wetting agent is N-oleoyl-sarcosinate, and wherein the overlay material is provided with

liquid conducting capacity selected to obviate excess sample from the detection layer.

42. (Previously Presented) The test strip of claim 41 wherein the overlay comprises one or

several flat overlay elements which are attached to the test strip in such a way that a part of their

surface can be displaced freely relative to the strip surface when the test strip is bent towards a side

on which the overlay is located.

43. (Previously Presented) The test strip of claim 42 wherein the test fields are covered by

the parts of the overlay elements that can be displaced freely relative to the strip surface.

44. (Previously Presented) The test strip of claim 42 wherein the overlay comprises two

overlay elements whose parts that can be displaced freely relative to the strip surface face one

another and overlap.

45. (Previously Presented) The test strip of claim 44 wherein the overlap covers two test

fields.

46. (Previously Presented) The test strip of claim 41 wherein the test strip comprises two

single or multilayer test fields for the same or different diagnostically usable analytes, said test fields

directly adjoining one another or being separated by a gap.

2

007404-000524.JBM.211072 Atty. Docket BMID 9826 US

47. (Previously Presented) The test strip of claim 41 wherein the arrangement of detection

layers and overlays on the test strip is covered with an inert flat material in such a manner that a

space only remains free that is adequate for sample application in an overlap region of the overlay

elements viewed in the direction of the longitudinal axis of the test strip.

48. (Previously Presented) The test strip of claim 41 wherein the hydrophilicity,

transparency and liquid conducting capacity of the overlay material are matched in such a manner

that a sample excess is not taken up by the strip.

49-55. (Canceled)

56. (New) A test strip comprising a flexible flat support in which one or several test fields

are arranged next to one another, said test fields carrying one or several detection layers stacked on

top of one another, said test field supporting a monofilament spreading material which is larger than

the test field and is attached to the support on both sides of the test field by means of a spacer having

the thickness of the test field whereby the part of the spreading material which extends beyond the

test field is covered by sample-impermeable material so that a sample application is only possible on

that part of the spreading material which rests on the test field, the spreading material comprising a

porous flat structure impregnated with a wetting agent, wherein the wetting agent is N-oleoyl-

sarcosinate.

57. (New) A test strip comprising a flexible flat support on which one or several test fields

are arranged next to one another, said test fields carrying one or several detection layers stacked on

top of one another and covered by an overlay made of a spreading material comprising a porous flat

structure impregnated with a wetting agent, wherein the wetting agent is N-oleoyl-sarcosinate, and

wherein the test fields are covered by the parts of the overlay elements that can be displaced freely

relative to the strip surface.

58. (New) The test strip of claim 57 wherein the hydrophilicity, transparency and liquid

conducting capacity of the overlay material are matched in such a manner that a sample excess is not

taken up by the strip.

3

007404-000524.JBM.211072 Atty. Docket BMID 9826 US

59. (New) The test strip of claim 57 wherein the test strip comprises two single or multilayer test fields for the same or different diagnostically usable analytes, said test fields directly adjoining one another or being separated by a gap.

60. (New) The test strip of claim 57 wherein the spreading material comprises 0.01 to 3.0% by weight of N-oleoyl-sarcosinate relative to the weight of the material before impregnation.

4
